TECHNICAL SKILLS

Browser Based Technologies

- HTML
- CSS
- JavaScript
- jQuery
- Responsive Design
- Bootstrap
- Local Storage, Session Storage

API Interaction

- API
- JSON
- AJAX

Server Side Development

- Node.js

PHP

Example projects done during coding boot camp:

1. Procrastination Tracker

Procrastination tracker is an easy to use task tracking app. This app allows you to track projects that you have been procrastinating.

You can enter project details with its due date. The project can be broken down into smaller achievable tasks.

Technology used:

Node.js, Express.js, MySQL, Sequelize ORM, npm package: add2calendar, Folder structure that meets MVC paradigm, Bootstrap, Authentication(express session & cookies), Handlebars, Deployed using Heroku with data

URL: <https://procrastination-tracker.herokuapp.com/>

2. What's in my pantry?

'What's In My Pantry' is an easy to use, all-in-one recipe search app that will display recipes based on a list of food items that are currently in your pantry. This app will allow you to check against a set list of allergies and dietary requirements.

As a bonus, the app will present you with a fun cat fact to keep you and your guests entertained while cooking.

Technology used:

HTML, CSS, JavaScript, Server side API (Edamam Recipe Search API and Cat Fact API), jQuery, bootstrap, google fonts, font Awesome, local storage.

URL: <https://sona29.github.io/whats-in-my-pantry/>

3. Weather Dashboard

This project is a weather dashboard to view weather condition according to city. This project uses OpenWeather One Call API to retrieve weather data for cities. When a user searches for a city name, then it gives the current weather followed by 5-day forecast. It displays temperature, wind and humidity and icon representation of weather conditions. It also displays the current UV index.

The searched city is also stored in local storage so a search history can be maintained. When clicking on the stored city name, again current and future temperature is displayed.

Technology used:

HTML, CSS, JavaScript, Server side API (OpenWeather), jQuery, bootstrap, google fonts, font Awesome, local storage.

URL: <https://sona29.github.io/weatherdashboard/>

4. Code Quiz

This assignment was done to learn web api's. This project is a timed code quiz. The total time of quiz is 120 seconds. There are total nine questions. The next question is displayed only when user clicks on correct answer.

The user can also save their score when the quiz ends. The score is saved in local storage. The user can see their saved scored when clicking on 'View High score'. The highest score is displayed first.

Technology used:

HTML, CSS, JavaScript, local storage.
